

CUSTOMIZED SYSTEMS

CUSTOMIZED RING BIT SYSTEMS are used when the job is so challenging that standard products are not enough. For these purposes we will make a project specific product where the design and materials will be chosen depending on customers requirements.

Applications for customized systems are e.g:

1. Drilling casing in extremely tough overburden
2. Long distances casing pulling in solid rock
3. Mine dump leaching
4. Drilling with internal grouting pipes
5. Hole openers
6. Rock removal drilling
7. DRCMaster (DTH rock socket with DRC)
